

Memorandum

25X1A

TO : [redacted] DATE: 10 November 1964

CC : Chief, GSD; Acting Chief, QRE

FROM : DAD/S&D

25X1A

SUBJECT: Notebook Entry - [redacted]

25X1A

Your notebook entry of 6 November regarding discussions between [redacted] indicate that television broadcasts in the

25X1A

Moscow area may be monitored through the use of a regular television receiver. The data required essentially is time on the air. Since this will require considerable attention from the operator, might it not be more desirable to use an automatic piece of equipment which would simply indicate up and down times without displaying the picture, etc. This is the sort of thing which [redacted] operation or GSD might be able to put together without too much effort. The frequencies to be monitored are known, I presume. Some of the techniques employed in [redacted] might be applicable.
